

Type S056

Type SE56

Full bore magmeter, hygienic process connections

- Combination of magflowsensor fitting S056 and electronics SE56
- Continuous measurement or Batch Control
- Sanitary version,  certificate
- Dedicated to food & beverage or pharmaceutical applications
- Low-flow measurements on from 3 l/h

Type 8056 can be combined with...

**Type 6223**

Solenoid control valve

**Type 8693**

Digital process controller

**Type 8644**

Valve islands

**PLC**

The complete full bore magflowmeter Type 8056, which consists of a magnetic sensor fitting Type S056 connected to an electronics Type SE56 (blind in compact version or with display in compact or remote version) is designed for applications with liquids with a minimum conductivity of 5 $\mu\text{S}/\text{cm}$.

Combined with a valve as the actuating element, the complete magflowmeter Type 8056 can control high-precision dosing operations and flow measurement in food & beverage or pharmaceutical industry.

Ordering information for complete flowmeter Type 8056

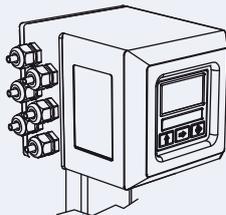

A complete flowmeter Type 8056 consists of a sensor fitting S056 and an electronics SE56.

The following information is necessary for the selection of a complete flowmeter:

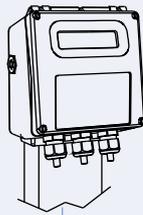

- **article no.** of the sensor fitting **Type S056** (see Ordering Chart on page 6)
- **article no.** of the electronics **Type SE56** (see corresponding data sheet or Ordering chart on page 7)

Design and operating principle

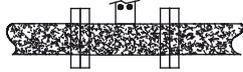

The sensor fitting Type S056 consists of a stainless steel pipe section internally lined with insulating material. Two electrodes mounted opposite to each other on the internal surface of the tube generate an electrical signal. The coils generating the magnetic field are placed outside the pipe. The signal generated by the sensor fitting S056 must be amplified and processed by an electronics (SE56) which outputs an electrical signal proportional to the fluid flow velocity respectively to the flow rate.

Faraday's induction law is the basis for this magnetic flow measurement.

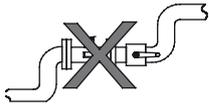

Installation

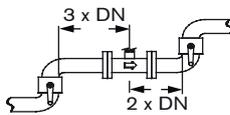

Avoid the functioning with the pipe partially filled.

During flowmeter operation the pipe must be completely full.

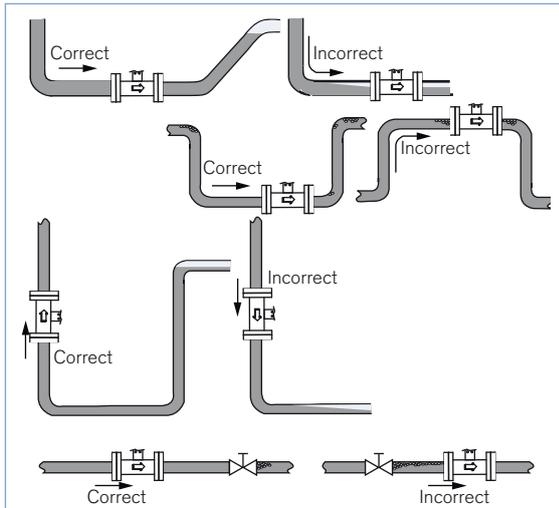

Avoid the installation near curves or hydraulic accessories.

Observe the upstream and downstream distances.

The sensor fitting can be installed into either horizontal or vertical pipes. Mount the sensor fitting in the below as correct indicated ways to obtain an accurate flow measurement.

The suitable pipe size is selected using the diagram Flow/Velocity/DN (see diagram to the right).

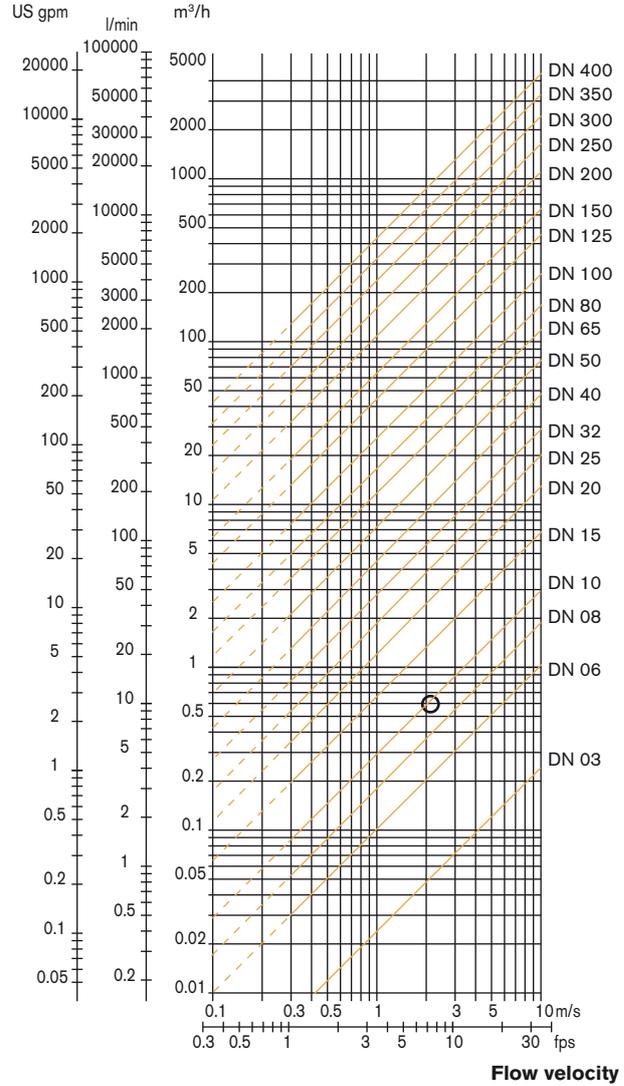

The flow sensor fitting is not designed for gas flow measurement.

Flow/Velocity/DN diagram

Example:

- Flow: 10 l/min
- Ideal flow velocity: 2 ... 3 m/s
- For these specifications, the diagram indicates a pipe size of DN10
